ABOUT THE PROJECT

The Disease Control Priorities Network at the University of Washington's Department of Global Health, funded by the Bill & Melinda Gates Foundation, promotes and supports the use of economic evaluation for priority setting at both global and national levels through policy advocacy, country engagement, and the production of *Disease Control Priorities, Third Edition (DCP3)*.

DISEASE CONTROL PRIORITIES, THIRD EDITION

Building on its predecessors *DCP1* (1993) and *DCP2* (2006), the third edition, published by the World Bank Group, provides the most up-to-date evidence on intervention efficacy and program effectiveness for the leading causes of the global disease burden. It goes beyond previous efforts by providing systematic economic evaluation of policy choices affecting the access, uptake, and quality of interventions and delivery platforms for low- and middle-income countries.

Complete volumes of *DCP3* will be published electronically and in hard copy in 2015 and 2016. They will be available at dcp-3.org and through the World Bank Open Knowledge Repository at openknowledge.worldbank.org.

DCP³

Disease Control Priorities

economic evaluation for health

- ► How can countries set priorities for health?
- How can countries improve population health, given limited resources?
- What steps are feasible on the pathway to universal health coverage?

Knowledge for Development

DCP3 - DISEASE CONTROL PRIORITIES, THIRD EDITION

DCP3 presents its findings in nine individual volumes addressed to specific audiences. The first eight volumes are structured around packages of conceptually related interventions, while the ninth provides an overview with main findings and conclusions about achieving health priorities.

Similar to the first and second editions, *DCP3* includes an up-to-date comprehensive review of the efficacy, effectiveness, and cost-effectiveness of priority health interventions, with the goal of influencing program design and resource allocation at global and country levels. In addition, *DCP3* volumes present systematic and comparable economic evaluations of selected interventions, delivery platforms, and policies, based on new analytical methods being developed specifically for DCPN. The comprehensive economic evaluation incorporates evidence on intervention quality and uptake, along with non-health outcomes such as equity and financial protection.

Volume 1 – Essential Surgery

March 2015

The Essential Surgery volume presents the burden of surgical conditions, along with health and economic analyses of procedures, platforms, and packages to improve care in settings with severe budget limitations. Underscoring surgery's contribution to global public health, the volume explores the challenges and successes found in implementing surgical care strategies in low- and middle-income countries.

Volume 2 – Reproductive, Maternal, Newborn, and Child Health

Early 2016

The Reproductive, Maternal, Newborn, and Child Health volume covers conditions along the reproductive health continuum, exploring interventions that support healthy lives from before birth until age five.

Volume 3 - Cancer

November 2015

The *Cancer* volume delves into the frequently overlooked burden of cancer in low-resource settings. Considering that cancer treatment is often prohibitively expensive, this volume explores feasible options for prevention, screening, and treatment of various types of cancer, as well as cancer-related insurance and financing policies.

Volume 4 – Mental, Neurological, and Substance Use Disorders

Late 2015

Mental, neurological, and substance use disorders take many forms that often require chronic treatment. This volume looks at global and regional estimates for the burden of these disorders, along with the effectiveness and cost-effectiveness of interventions and packages of care available in low- and middle-income countries.

Volume 5 – Cardiovascular, Respiratory, and Related Disorders

2016

Non-communicable diseases are the largest contributor to premature morbidity and mortality globally. This volume reviews the health and economic burden of such diseases, and effective and feasible options for prevention, diagnosis, and treatment.

An essential resource for countries as they consider how best to improve health care, as well as for the global health policy community, technical specialists, and students.

Volume 6 – HIV/AIDS, STIs, Tuberculosis, and Malaria

2016

The HIV/AIDS, STIs, Tuberculosis, and Malaria volume explores the cost-effectiveness of prevention, treatment, and management of major infectious diseases endemic in low-resource settings.

Treatment as disease prevention, specialized health delivery platforms for certain populations, balancing access to TB prevention and treatment, and malaria elimination are among the topics highlighted.

Volume 7 – Injury Prevention and Environmental Health

2016

The *Injury Prevention and Environmental Health* volume addresses topics such as interpersonal violence, water and sanitation, global warming, road traffic injury, unintentional injury, priorities for environmental health and injury control, and policy implications for addressing these conditions.

Volume 8 – Child and Adolescent Development

2016

The Child and Adolescent Development volume discusses childhood chronic illnesses, chronic malnutrition, and cognitive development. It seeks to evolve beyond the acute and severe conditions traditionally addressed under the rubric of child health, and give emphasis to the longer run consequences of chronic conditions.

Volume 9 – Disease Control Priorities: Improving Health and Reducing Poverty

2016

The final volume in the series provides an overview of *DCP3* findings, including a summary of messages and substantive lessons to be taken from *DCP3*. This volume discusses health system policies (such as financing global health, quality of care, and strengthening regulatory systems in low- and middle-income countries), as well as the methods and resources used throughout all *DCP3* volumes.
