Disease Control Priorities: Improving Health and Reducing Poverty
DISEASE CONTROL PRIORITIES

Budgets constrain choices. Policy analysis helps decision makers achieve the greatest value from limited available resources. In 1993, the World Bank published Disease Control Priorities in Developing Countries (DCP1), an attempt to systematically assess the cost-effectiveness (value for money) of interventions that would address the major sources of disease burden in low- and middle-income countries. The World Bank’s 1993 World Development Report on health drew heavily on DCP1’s findings to conclude that specific interventions against noncommunicable diseases were cost-effective, even in environments in which substantial burdens of infection and undernutrition persisted.

DCP2, published in 2006, updated and extended DCP1 in several aspects, including explicit consideration of the implications for health systems of expanded intervention coverage. One way that health systems expand intervention coverage is through selected platforms that deliver interventions that require similar logistics but deliver interventions from different packages of conceptually related interventions, for example, against cardiovascular disease. Platforms often provide a more natural unit for investment than do individual interventions. Analysis of the costs of packages and platforms—and of the health improvements they can generate in given epidemiological environments—can help to guide health system investments and development.

DCP3 differs importantly from DCP1 and DCP2 by extending and consolidating the concepts of platforms and packages and by offering explicit consideration of the financial risk protection objective of health systems. In populations lacking access to health insurance or prepaid care, medical expenses that are high relative to income can be impoverishing. Where incomes are low, seemingly inexpensive medical procedures can have catastrophic financial effects. DCP3 offers an approach to explicitly include financial protection as well as the distribution across income groups of financial and health outcomes resulting from policies (for example, public finance) to increase intervention uptake. The task in all of the DCP volumes has been to combine the available science about interventions implemented in very specific locales and under very specific conditions with informed judgment to reach reasonable conclusions about the impact of intervention mixes in diverse environments. DCP3’s broad aim is to delineate essential intervention packages and their related delivery platforms to assist decision makers in allocating often tightly constrained budgets so that health system objectives are maximally achieved.

DCP3’s nine volumes are being published in 2015, 2016, 2017, and 2018 in an environment in which serious discussion continues about quantifying the sustainable development goal (SDG) for health. DCP3’s analyses are well-placed to assist in choosing the means to attain the health SDG and assessing the related costs. Only when these volumes, and the analytic efforts on which they are based, are completed will we be able to explore SDG-related and other broad policy conclusions and generalizations. The final DCP3 volume will report those conclusions. Each individual volume will provide valuable, specific policy analyses on the full range of interventions, packages, and policies relevant to its health topic.

More than 500 individuals and multiple institutions have contributed to DCP3. We convey our acknowledgments elsewhere in this volume. Here we express our particular
gratitude to the Bill & Melinda Gates Foundation for its sustained financial support, to the InterAcademy Medical Panel (and its U.S. affiliate, the National Academies of Science, Engineering, and Medicine), and to the External and Corporate Relations Publishing and Knowledge division of the World Bank. Each played a critical role in this effort.

## Contents

Foreword xiii  
Preface xv  
Abbreviations xvii  

1. Child and Adolescent Health and Development: Realizing Neglected Potential 1  
   Donald A. P. Bundy, Nilanthi de Silva, Susan Horton, George C. Patton, Linda Schultz,  
   and Dean T. Jamison  

PART 1 ESTIMATES OF MORTALITY AND MORBIDITY IN CHILDREN (AGES 5–19 YEARS)  

   Kenneth Hill, Linnea Zimmerman, and Dean T. Jamison  

3. Global Nutrition Outcomes at Ages 5 to 19 37  
   Rae Galloway  

4. Global Variation in Education Outcomes at Ages 5 to 19 47  
   Kin Bing Wu  

5. Global Measures of Health Risks and Disease Burden in Adolescents 57  
   George C. Patton, Peter Azzopardi, Elissa Kennedy, Carolyn Coffey, and Ali Mokdad  

PART 2 IMPACT OF INTERVENTIONS DURING THE LIFE COURSE (AGES 5–19 YEARS)  

6. Impact of Interventions on Health and Development during Childhood  
   and Adolescence: A Conceptual Framework 73  
   Donald A. P. Bundy and Susan Horton  

7. Evidence of Impact of Interventions on Growth and Development during  
   Early and Middle Childhood 79  
   Harold Alderman, Jere R. Behrman, Paul Glewwe, Lia Fernald, and Susan Walker
8. Evidence of Impact of Interventions on Health and Development during Middle Childhood and School Age 99
Kristie L. Watkins, Donald A. P. Bundy, Dean T. Jamison, Günther Fink, and Andreas Georgiadis

9. Puberty, Developmental Processes, and Health Interventions 107
Russell M. Viner, Nicholas B. Allen, and George C. Patton

10. Brain Development: The Effect of Interventions on Children and Adolescents 119
Elena L. Grigorenko

PART 3 CONDITIONS AND INTERVENTIONS

11. Nutrition in Middle Childhood and Adolescence 133
Zohra Lassi, Anoosh Moin, and Zulfiqar Bhutta

12. School Feeding Programs in Middle Childhood and Adolescence 147
Lesley Drake, Meena Fernandes, Elisabetta Aurino, Josephine Kiamba, Boitshepo Giyose, Carmen Burbano, Harold Alderman, Lu Mai, Arlene Mitchell, and Aulo Gelli

13. Mass Deworming Programs in Middle Childhood and Adolescence 165
Donald A. P. Bundy, Laura J. Appleby, Mark Bradley, Kevin Croke, T. Deirdre Hollingsworth, Rachel Pullan, Hugo C. Turner, and Nilanthi de Silva

14. Malaria in Middle Childhood and Adolescence 183
Simon J. Brooker, Sian Clarke, Deepika Fernando, Caroline W. Gitonga, Joaniter Nankabirwa, David Schellenberg, and Brian Greenwood

15. School-Based Delivery of Vaccines to 5- to 19-Year Olds 199
D. Scott LaMontagne, Tania Cernuschi, Ahmada Yakubu, Paul Bloem, Deborah Watson-Jones, and Jane J. Kim

16. Promoting Oral Health through Programs in Middle Childhood and Adolescence 211
Habib Benzian, Renu Garg, Bella Monse, Nicole Stauf, and Benoit Varenne

17. Disability in Middle Childhood and Adolescence 221
Natasha Graham, Linda Schultz, Sophie Mitra, and Daniel Mont

18. Health and Disease in Adolescence 239
Nicola Reavley, George C. Patton, Susan M. Sawyer, Elissa Kennedy, and Peter Azzopardi

PART 4 PACKAGES AND PLATFORMS TO PROMOTE CHILD AND ADOLESCENT DEVELOPMENT

19. Platforms to Reach Children in Early Childhood 253
Maureen M. Black, Amber Gove, and Katherine A. Merseth
20. The School as a Platform for Addressing Health in Middle Childhood and Adolescence  
Donald A. P. Bundy, Linda Schultz, Bachir Sarr, Louise Banham, 
Peter Colenso, and Lesley Drake

21. Platforms for Delivering Adolescent Health Actions  
Susan M. Sawyer, Nicola Reavley, Chris Bonell, and 
George C. Patton

22. Getting to Education Outcomes: Reviewing Evidence from Health and Education Interventions  
Daniel Plaut, Milan Thomas, Tara Hill, Jordan Worthington, Meena Fernandes, 
and Nicholas Burnett

23. Cash Transfers and Child and Adolescent Development  
Damien de Walque, Lia Fernald, Paul Gerber, 
Melissa Hidrobo

PART 5 THE ECONOMICS OF CHILD DEVELOPMENT

24. Identifying an Essential Package for Early Child Development: Economic Analysis  
Susan Horton and Maureen M. Black

25. Identifying an Essential Package for School-Age Child Health: Economic Analysis  
Meena Fernandes and Elisabetta Aurino

26. Identifying an Essential Package for Adolescent Health: Economic Analysis  
Susan Horton, Elia De la Cruz Toledo, Jacqueline Mahon, John Santelli, and 
Jane Waldfogel

27. The Human Capital and Productivity Benefits of Early Childhood Nutritional Interventions  
Arindam Nandi, Jere R. Behrman, Sonia Bhalotra, Anil B. Deolalikar, and 
Ramanan Laxminarayan

28. Postponing Adolescent Parity in Developing Countries through Education: An Extended Cost-Effectiveness Analysis  
Stéphane Verguet, Arindam Nandi, Véronique Filippi, and 
Donald A. P. Bundy

29. Economics of Mass Deworming Programs  
Amrita Ahuja, Sarah Baird, Joan Hamory Hicks, Michael Kremer, and 
Edward Miguel
HEALTH AND EDUCATION DURING THE 8,000 DAYS OF CHILD AND ADOLESCENT DEVELOPMENT: TWO SIDES OF THE SAME COIN

Today, there is comfort to be found in returning to the inspired words of others. Until H. G. Wells’ time machine is made, words are our emotional anchor to the past and, one hopes, our window to a brighter future. Speaking before the 18th General Assembly of the United Nations in 1963, it was President John F. Kennedy who noted that the “effort to improve the conditions of man, however, is not a task for the few.” Development is a shared, cross-cutting mission I know well. For the breakthroughs we witness—from Borlaug’s wheat to a vaccine for polio—are the products of cooperation, a clean break from siloed thinking, and a courage to work at the sharp edges of disciplines.

Working as a lecturer for five years in the 1970s and early 1980s, I came to see—in a way I never had as a student—that education unlocks talent and unleashes potential. And as Chancellor, Prime Minister, and most importantly a parent, education has remained a centerpiece in my life because of the hope it delivers. For when we ask ourselves what breaks the weak, it is not the Mediterranean wave that submerges the life vest, nor the food convoy that does not make it to the besieged Syrian town. Rather, it is the absence of hope, the soul-crushing certainty that there is nothing ahead to plan or prepare for—not even a place in school.

Two years ago, the International Commission on Financing Global Education Opportunity, composed of two dozen global leaders and convened by the Prime Minister of Norway and the Presidents of Chile, Indonesia, and Malawi, as well as the Director-General of UNESCO, set out to make a new investment case for global education. What resulted was a credible yet ambitious plan capable of ensuring that the Sustainable Development Goal of an inclusive and quality education for all is met by the 2030 deadline. While we continue to work today to ensure our messages become action—from increased domestic spending on schooling to an International Finance Facility for Education—we sought to produce an authoritative, technically strong report that would spend more time being open on desks than collecting dust on a shelf.

The Disease Control Priorities (DCP) series established in 1993 shares this philosophy and acts as a key resource for Ministers of Health and Finance, guiding them toward informed decisions about investing in health. The third edition of DCP rightly recognizes that good health is but one facet of human development and that health and education outcomes are forever intertwined. The Commission report makes clear that more education equates with better health outcomes. And approaching this reality from the other direction, this year’s volume of DCP shows that children who are in good health and appropriately nourished are more likely to participate in school and to learn while there. The Commission report raises the concept of progressive universalism or giving greatest priority to those children most at risk of being excluded from learning. Here, too, the alignment with DCP is clear as health strides are most apparent when directed to the poorest and sickest children, as well as girls.

It is fitting that one of the Commission’s background papers appears as a chapter in this volume. The Commission showed that education spending, particularly for adolescent girls, is a moral imperative and an economic necessity. Indeed, girls are the least likely to
go to primary school, the least likely to enter or complete secondary school, highly unlikely to matriculate to college, and the most likely to be married at a young age, to be forced into domestic service or trafficked. And with uneducated girls bearing five children against two children for educated girls, the vicious cycle of illiterate girls, high birth rates, low national incomes per head, and migration in search of opportunity will only worsen so long as we fail to deliver that most fundamental right to an education.

Here is a projection to remember. If current education funding trends hold, by 2030, 800 million children—half a generation—will lack the basic secondary skills necessary to thrive in an unknowable future. In calling for more and better results-based education spending, the Commission estimated that current total annual education expenditure is US$1.3 trillion across low- and middle-income countries, an anemic sum that must steadily rise to US$3 trillion by 2030. A rising tide must lift all ships, and so as education spending at the domestic and international levels sees an uptick, the same must be witnessed for health. The numbers may seem large, but the reality is that this relatively inexpensive effort would do more than unlock better health and education outcomes; it would bring us closer to achieving all 17 Sustainable Development Goals and unlocking the next stage of global growth.

A key message of this volume is that human development is a slow process; it takes two decades—8,000 days—for a human to develop physically and mentally. We also know a proper education requires time. So the world needs to invest widely, deeply, and effectively—across education, health, and all development sectors—during childhood and adolescence. And while individuals may have 8,000 days to develop, we must mobilize our resources today to secure their tomorrow. Let us not forget that the current generation of young people will transition to adulthood in 2030, and it will be their contribution that will determine whether the world achieves the Sustainable Development Goals.

We have, to again draw on Kennedy’s words, “the capacity to control [our] environment, to end thirst and hunger, to conquer poverty and disease, to banish illiteracy and massive human misery.” We have this capacity, but only when we work together. Both the Commission report and this latest Disease Control Priorities volume seek to elevate cross-sector initiatives on the global agenda. In human development, health and education are two sides of the same coin: only when we speak as one will this call be heard.

Gordon Brown
United Nations Special Envoy for Global Education
Chair of the International Commission on Financing Global Education Opportunity
Prime Minister of the United Kingdom, 2007–2010
Chancellor of the Exchequer, 1997–2007
More children born today will survive to adulthood than at any time in human history. This is true both in terms of the proportion of live births and of absolute numbers. The current cohort of children who have survived to age 5 years will transition to adulthood around 2030 and will be the Sustainable Development Goals (SDGs) generation. The health, nutrition, and education of these young people as they develop from ages 5 to 19 years will have lifelong consequences for the adults they become and for their role in the development of the next generation. Will the world have prepared them well for this task?

Our analyses in this volume show that although the education of this age group is the primary focus of public sector investment, their health is a much lower priority. Indeed, middle childhood and adolescence has historically received the least attention of any age group.

Health and development in middle childhood and adolescence is a new focus of the Disease Control Priorities series, which was first published in conjunction with the World Bank’s World Development Report 1993: Investing in Health, and which has become a key reference for health policy makers in low- and middle-income countries (box 1.1). The earlier editions touched on human development; this third edition is the first to give a specific focus beyond health to issues of human development, including the special role of the education sector, and the first to give prominence to health in this age group. This volume complements volume 2, Reproductive, Maternal, Newborn, and Child Health, which focuses on health in the under-five age group.

This volume presents its analyses and conclusions in 30 chapters grouped into five parts:

- **Part 1. Estimates of Mortality and Morbidity in Children (Ages 5 to 19 Years)** explores mortality and morbidity in this age group, with a focus on low- and lower-middle-income countries. A new analysis of mortality is presented, with surprising conclusions, and morbidity is examined with respect to three selected issues: nutrition, education, and health in adolescence.
- **Part 2. Impact of Interventions during the Life Course (Ages 5–19 Years)** reviews development issues at different stages in the life course and presents a conceptual framework for health and development from birth, through middle childhood and adolescence, to young adulthood.
- **Part 3. Conditions and Interventions** describes the evolving age distribution of disease and how new understanding of interventions and epidemiology has transformed the ways in which health systems can contribute to health and development objectives.
- **Part 4. Packages and Platforms to Promote Child and Adolescent Development** explores how novel approaches to policy that deliver health and development interventions to children and adolescents are slowly being implemented in low-income countries. In many cases, the focus is on vertical programs as part of underdeveloped primary health care systems, with a particular emphasis on school-based delivery. Current health systems often fail children and adolescents, especially in the low-income countries and communities that most need them.
- **Part 5. The Economics of Child Development** assembles economic data and seeks to prioritize interventions within three age classes: early childhood, school-age, and adolescence. Each age group is considered in a separate chapter, and each chapter prioritizes interventions on the basis of cost-effectiveness, extended cost-effectiveness, benefit-costs, and returns on investment. Part 5 also includes age-specific economic analysis of important areas of development, including the role of education in delaying
pregnancy and marriage, as well as public financing for mass deworming as an example of school-based intervention.

We would like to acknowledge the many thoughtful people who contributed to the content and conclusions of this volume. The 110 authors from 19 countries contributed most directly to the preparation of the 30 chapters presented here; the volume simply could never have happened without their substantial investment of time and effort in crafting and writing the chapters. We, and they, thank the more than 60 independent reviewers, selected and commissioned by the National Academy of Science, Engineering, and Medicine, who provided peer reviews of all of the chapters (see the section entitled “Reviewers” at the end of the volume for a detailed listing of these individuals).

As a further check on the policy implications of the conclusions, we sought input from those more directly involved in health policy making. A policy consultation was held in Geneva under the leadership of the Regional Director of the World Health Organization (WHO) Eastern Mediterranean Regional Office, with representation from 10 countries. The African Union hosted a regional consultation of Ministry of Health representatives from five countries in Sub-Saharan Africa. We also presented the main conclusions at a variety of fora, seeking feedback from practitioners—including the annual meeting of the European Society for Paediatric Infectious Diseases, in Brighton, United Kingdom; and the Bill & Melinda Gates Foundation, in Seattle, Washington, United States. We are grateful for the many thoughtful responses that we received.

We would also like to recognize our debt to all those who contributed to The Lancet Commission on Adolescent Health and Wellbeing. This volume was written in parallel with the report of the Commission and shares some common editors and authors. We support the conclusions of the Commission’s report, published in May 2016 (Patton and others); we extend them in this volume to include further economic analysis, as well as an exploration of the health and development needs of children in middle childhood, an age group that may be even more neglected than adolescents in public health policy and planning.

The main conclusion of this volume is that human development is a process that extends over the first two decades of life; for individuals to achieve their full potential, there is a need for age- and condition-specific interventions throughout this 20-year period. The current focus on the “first 1,000 days” represents a failure to recognize the critical importance of subsequent development during middle childhood and adolescence. Although intervention during the first 1,000 days is indeed the essential foundation for subsequent development, it cannot serve as a substitute for continuing intervention during three key phases:

- The middle childhood phase of growth and consolidation (ages 5–9 years), when infection and malnutrition remain key constraints on development, and mortality rates are much higher than previously realized
- The adolescent growth spurt (ages 10–14 years), when the increase in muscle, bone, and organ mass approaches rates not seen since age 2 years, and there are commensurate demands for good diet and health
- The adolescent phase of growth and consolidation (ages 15–19 years), when major restructuring of the brain is associated with behavioral and social experimentation that has lifelong consequence.

We note the asymmetry between the public investment in formal education versus health during the age range of 5–19 years, and the lack of recognition that the developmental returns from education are themselves dependent on concurrent good health and diet. We argue that current policy on health and development has substantially neglected and underserved children in this age range, and that there is too little research on how to respond to the needs of middle childhood and adolescence. We propose packages of interventions for these crucial later phases of development that are in the same range of cost-effectiveness as interventions in the early years of life but of substantially lower cost. We also call for significantly increased investment in research into the health and development needs during middle childhood and adolescence.
